

Efficiency Study

North Carolina Alternative Energy Corporation, a nonprofit organization examined air conditioning manufacturer's efficiencies versus the actual efficiencies that resulted after installation. Their findings may surprise you.

- 90% of the units tested exhibited some energy wasting problems.
- 50% had an improper refrigerant charge.
- 40% failed to meet minimum air flow criterion.
- 20% were barely inside the range specified by manufacturers

A deficiency of only 20% in indoor air flow reduces the SEER rating by 17%. A 15% return air leak from a 120° attic could reduce a 12 SEER to a 6 SEER rating.

Realizing the importance of proper installation, Master Air starts with the best products available. This is followed by a custom design for your system and backing it with total service. We never cut corners because we realize that you may need future service. If the job is done right the first time, you will continue to choose Master Air for all your comfort needs.

Many new customers come from referrals because of our sincere desire to provide the best service in the business. As stated by Master Air, "The way I see it, I want to get the most for my money, and I treat my customers the same way. That way, you'll continue to call Master Air, Air Conditioning and Heating all your comfort needs. Keeping you comfortable is our goal. We want to be your HVAC Company today, tomorrow and for your years of comfort to come."
